

DUBBO

CITY COUNCIL

15 May 2013

To whom it may concern

This reference serves to confirm that the Dubbo City Council has been using Eco Tabs and Shock in various Sewage Pump Stations and Raised Mains since October 2012. We have noted that the stations have been maintained without any organic solids or grease accumulations. Since starting our treatment with Eco Tabs, we have been advised not to manually clean the stations so the tablets can work more efficiently. These stations previously required bi-weekly manual cleaning. In addition, we have noted mass reductions in H₂S levels and corrosion in areas of our system where Eco Tabs and Eco Shock have been used.

We are very pleased with the performance of the Eco Tabs technology and look forward to the continued use thereof within our network.
