Re: ECO-h usage at Houma, LA WWTP

Dear Mr. O'Malley,

I am writing to you to thank you for providing us with a product line that has helped our facility improve its overall operations. We have reduced manpower hours, decreased volume of sludge, FOG and hydrocarbon contaminants in our WWTP, and have significantly reduced malodors that have emanated from our site for years.

Ultimately, your products do what you claimed they would do. That is, they work! We have tried many microbial remediation/augmentation products in the past that have claimed to do what yours has done. Of course, as we discussed at your visit to our campus in March of this year, most of those other products did absolutely nothing to enhance our WWTP operations.

Specifically, we have used Eco-tabs Wastewater Tablets to reduce sludge in our lagoons and to degrade old, caked sludge in our aging infrastructure (pipes, lifts, pumps, etc.). We have had excellent results from this product, and have even received comments from our residential neighbors regarding the decrease in malodors emanating from the WWTP. This odor reduction was not the impetus for our use of your products, but it is definitely an unexpected benefit from our use of Eco-tabs.

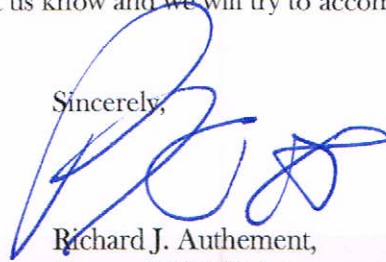

Further, it has been our pleasure to test and trial the ECO-h Bioremediation Product for hydrocarbon remediation. We have had some degree of difficulty in meeting state DEP requirements for our wastewater effluent because of by-products from the local oil and gas drilling operations. It goes without saying that your ECO-h product works to aggressively reduce Total Petroleum Hydrocarbons (TPH) and other contaminants in our waste stream.

Having worked as in management for pipeline operations and off-shore platform operations for Chevron for 40+ years, I can state with a high degree of confidence and credibility that the oil and gas industry in Louisiana and Texas has a great need for your products, and especially for your hands-on project management approach. I know the key players in the local O&G industry and can facilitate your penetration of the industry in the region. Please do not hesitate to use my name as a reference.

Lastly, we will continue to use ECO's products to keep our WWTP in compliance with municipal regulations, and to maintain the improved operations at our WWTP here in Southern Louisiana. If you have any need of a facility for additional trials and/or testing for your obviously expanding product line, please let us know and we will try to accommodate.

Sincerely,

Richard J. Authement,
Licensed WWTP Operator, 2
Director, CanAm Energy, LLC
